## International Student Service Center

The government of the Republic of Korea has made an effort to attract international students to Korea since 2004, when the government established STUDY KOREA PROJECT. As evidence of our work, now we are welcoming the era of 90,000 international students in Korea.

Now, it is the time to make an effort not just for the quantitative expansion of the number of international students, but for alleviating the sufferings of students by recognizing the real difficulties of living and studying in Korea. In this sense, we have established the International Student Service Center at the National Institute for International Education.

The NIIED (National Institute for International Education) International Student Service Center offers a variety of information about studying in Korea to all international students. We listen to all problems and try to find ways to help students. We expect international students to succeed with their studies in Korea through consulting with us for their problems.

The International Student Service Center will support international students with our best effort to help them to realize their dreams by studying in Korea.
